Welcome Pack

Welcome to your CrashMap

Dear User,

On behalf of Agilysis, we are thrilled to welcome you to CrashMap Pro.

Included in this welcome packet, you will find information that will help you get the most out of the tool.

We are poised to provide you with support and guidance for getting started with CrashMap Pro. If you have any questions about the tool, our customer care team are on hand and can be reached over the phone or via the email address at the bottom of this letter.

We also run regular drop-in sessions each month. These 10-minute sessions with one of the team are there to provide any refresher training or support for any queries you may have about the tool. You'll be able to find the links to register for these via our website.

You can expect to receive a user newsletter every 6 months outlining any news, updates or helpful tips when using the tool, as well as a reminder of all the resources we have on offer to support CrashMap Pro users.

Each year we hold the annual user group. The user group meetings are exclusively for existing users of the software and provides a platform to discuss the data behind the tool, new feature updates, and an opportunity to exchange feedback. Your input will help shape future updates by identifying any changes or new features that we could introduce to improve the tool.

We value feedback from our customers as it lets us know where we are getting things right and identify areas where we can improve.

Thank you once again for choosing Agilysis.

Kind regards,

Dan Campsall
Chairman

CrashMap Pro by Agilysis

Full GB coverage

Complete coverage across the entire GB road network, identifying reported injury collisions from the last 10 years.

Easy to use GIS

The power of GIS built into an easy to use interface means that little technical expertise is needed to start analysing data, and producing quality reports.

Generate reports quickly

Generate pdf reports from your analysis with the click of a button.

Cost and Time savings

Web browser based and easy to use, CrashMap Pro cuts down on the time needed to analyse raw data, saving valuable time.

CrashMap Pro is used by highway authorities, partnerships, police, planning and engineering firms throughout the UK to monitor and analyse road networks.

Built for professionals

Easily identify collision hotspots and at risk groups with an easy to use online mapping solution with enhanced analytical power for professionals. CrashMap Pro allows users to filter, select and download official STATS 19 data on a map in a highly visual way.

Enhanced Analysis

With access to detailed records from the last 10 years, users can analyse by location, proximity, areas or routes. Or by importing their own polygon.

Results can be easily downloaded for any further offline analysis, or can be downloaded as a pre-prepared pdf report by using the advanced query options.

Local Editions

Subject to a data sharing agreement, CrashMap Local editions include a quarterly import of the latest local injury collision data. As such, they are usually only available to the public sector.

TRANSFORMING LIVES THROUGH
SAFER & HEALTHIER COMMUNITIES

About Agilysis

Agilysis is a leading transport safety consultancy who provide strategic support and data platforms to local authorities, road safety partnerships and roads policing throughout Great Britain and across the globe. Specialising in Safe System methodology, we have supported national governments and transport authorities to develop and deliver on new strategies to help them achieve their Vision Zero goals.

We have an extensive track record of working with public and private sector clients to deliver perceptive and relevant studies using state of the art techniques, including multidimensional data mining, socio demographic segmentation, geo-spatial methodology and contextualisation.

With access to a wide variety of datasets such as live and historical connected vehicle data, the Agilysis team provide insightful and rigorous analysis of trends in road traffic collisions and the people involved in them.

At Agilysis we have the ambition to create safe and sustainable communities for all. Our experienced team have been working together on innovative projects for over a decade. We are absolutely focussed on understanding 'what works', using evidence from all available data sources, as well as published research.

As both researchers and practitioners in social marketing, we also understand the practical requirements of those delivering training, campaigns and public relations exercises. Our principles are therefore directed towards ensuring that realistic, effective interventions can deliver outputs and outcomes for clients.

Supporting Products

Speed Compliance Tool

A powerful yet easy-to-use solution providing access to information about speed limits and average speeds on roads across Great Britain, but focussed on your local area. The online dashboard is priced on a per-user basis to keep costs down and is available for a small fee for existing CrashMap Pro users. Customers only pay for the coverage they need meaning lower costs for authorities with shorter road networks.

Active Streets Assessment Tool

Identifying appropriate locations for new segregated cycleways, footpaths, point closures, and area-wide measures can now be undertaken quickly and effectively using the new Active Streets Assessment Tool. This tool embraces detailed network infrastructure data from Ordnance Survey Master Map, enhanced with additional datasets for individual road sections including network flow, average speeds, 85th percentile speeds, modelled congestion, and collision history.

Area Profiles

Area Profiles

An Area Profile provides a local area with an excellent resource that details casualty trends, highlights at-risk groups, and compares performance against national benchmarks. These detailed reports are based on the national STATS 19 collision data, blended with a wide array of public and proprietary data to provide context and insight into those injured on the roads and the communities that they come from.
